**BRIO Railway**  
A toy which stimulates the imagination  
and provides unlimited fun!

The BRIO Railway is fun to play with and of unmatched educational value.

It reinforces children's motor skills; increases their understanding of space, size, balance and pattern; challenges them to solve problems; inspires imagination and invites role-playing; encourages cooperation; develops self-esteem and strengthens self-confidence.

With the Railway, there is no right or wrong way to play. Anything goes, and everything is possible due to the extensive choice of pieces and the unlimited variations.

# Start with a basic set.

It is easy to start with a basic set. Choices range from the small circular track to more complex layouts. The selection of the basic set depends on a child's age, ability and interest level.

After the initial set, more track will be added to expand the system. The tunnel and bridges add interest to any layout and additional trains make it possible for more children to play. With the addition of vehicles and playscapes, children are able to transform a simple, basic set into a wondrous

layout. Accessories can also be used alone, as they are excellent toys in themselves.

Here are some hints for extending the basic sets. These are suggestions only, for children have many ideas and usually choose to design their own layout. It is not necessary to duplicate the picture on the box or use all the pieces. The Railway is a wonderful example of an open-ended toy. Children can create their own worlds and in the process build competence, confidence and a sense of pride and self-worth.

# This is how the BRIO Wooden Railway works.

The BRIO Wooden Railway is a very flexible system which can be expanded in an unlimited number of ways. The basic track pieces are modular and interchangeable. For example, the tunnel is the same

length as the long straight track (d), so a layout can be altered by using them interchangeably. There is an assortment of straight track, curved track, switches and elevated track and bridges. These pieces can be combined and recombined in different ways to make either a simple layout or a complex, multi-level labyrinth.
